

BACKSPACE

In many ways, Backspace II is a joy for the eye, be it by its slender design, by its pleasant light effect or by its playful colour combinations. Backspace II is designed to create a 2-way light effect on the wall, the choice to install it in a horizontal or vertical way is up to you.

By mounting the light source in the front part of the luminaire, it is perfectly shielded from looking directly into the source. Backspace II can be used for interior lighting in a white, grey or dark grey finish or for outdoor settings in grey or dark grey. An additional touch of colour can be added to the luminaires by opting for an extra golden reflector.
